Create a database in mysql server called mtn and table called client

Online application created using visual basic 2013

MTN UGANDA

Home | About us | Client Online Registration | Contact us | Login

MTN CLIENT ONLINE REGISTRATION

Reg No.	
Client Name	
Subcribe Contact	
Item Bought	Modem
Amount Paid	
Date Of Registration	

ID : a

ID : b

ID : c

ID : d

ID : f

ID : ii

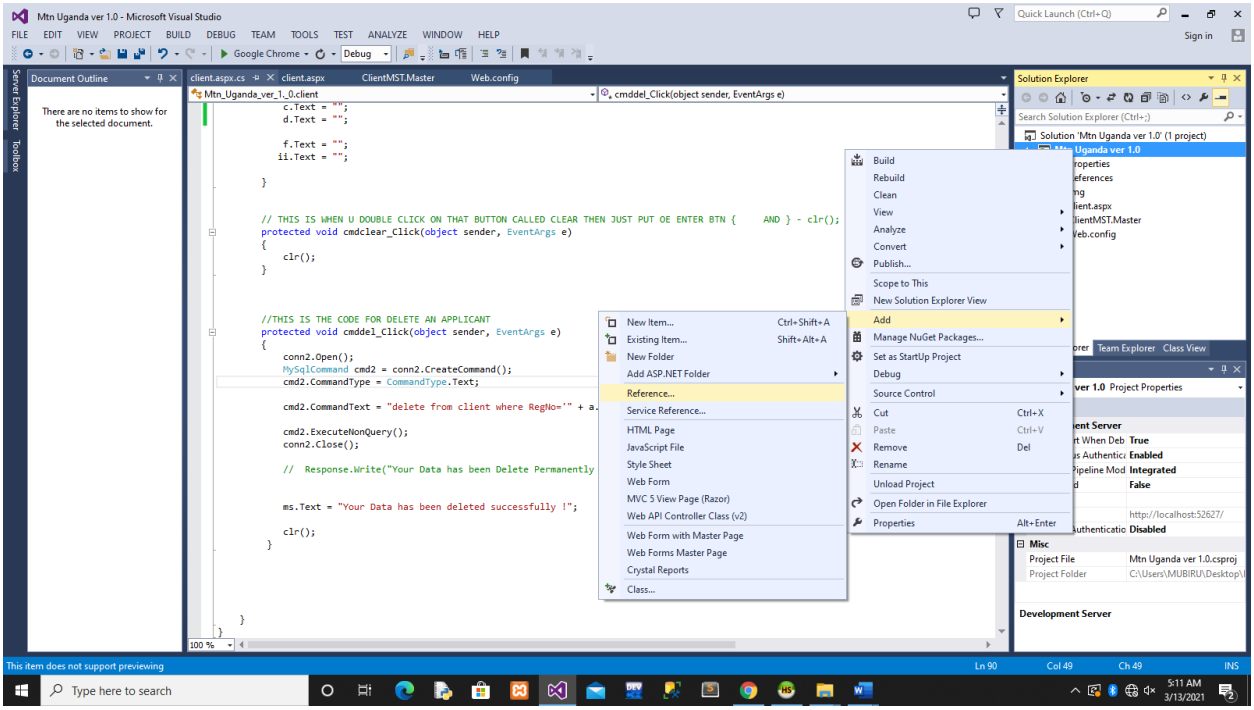

ID : cmdsave | ID: cmdClear | ID: cmddel | ID: cmdUpdate

Submit | Clear | Delete | Update | Button

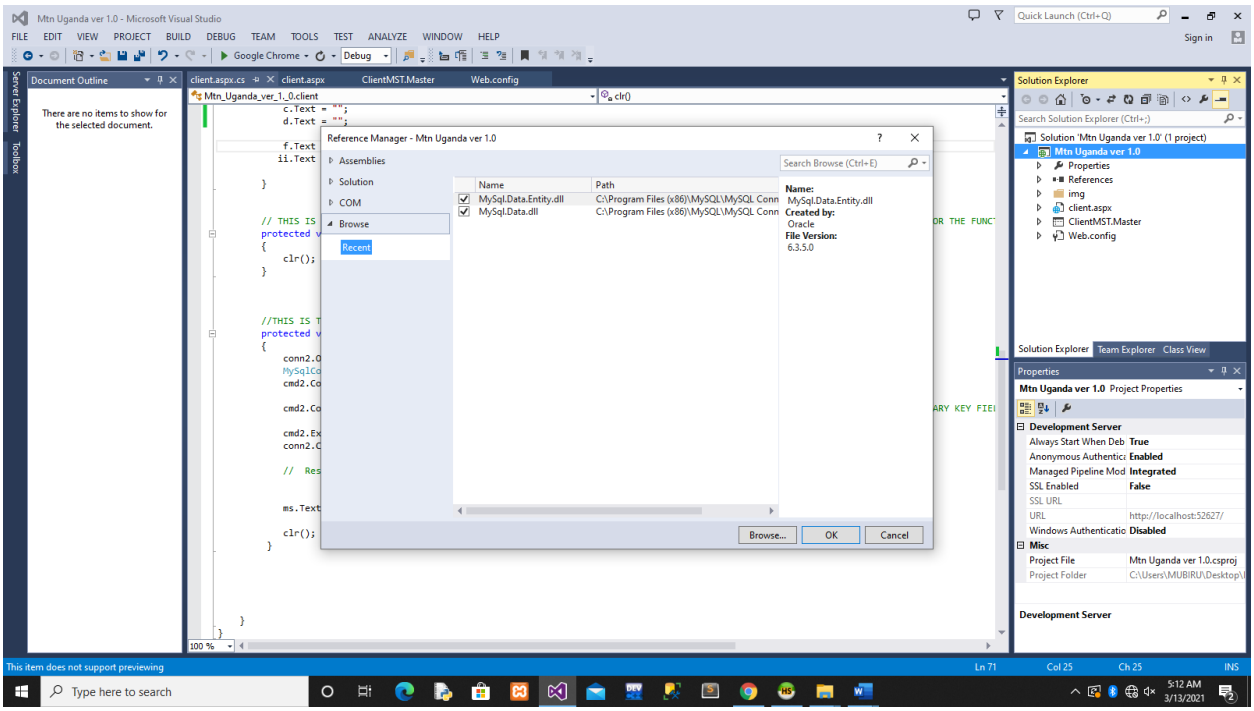

Your Data has been saved successfully !

Copy Right @ 2021 mtn Group of Companies

Adding reference

Look were you installed mysql connector (program files (86) under mysql folder the u will see mysql connector =Assemblies=v2 and v4

OPEN (WEB.CONFIG) FROM SOLUTION ON YOUR RIGHT PANEL

```
<?xml version="1.0"?>

<!--
  For more information on how to configure your ASP.NET application, please visit
  http://go.microsoft.com/fwlink/?LinkId=169433
  -->

<configuration>

  <!--
  Eng Mubiru Code note ,please copy this copy from my notes and paste here
connectionStrings and name use any = (MtnAppConnString) or maintain it for codes
  and change database =mtn

  -->

  <connectionStrings>
    <add name="MtnAppConnString" connectionString="server=127.0.0.1;User
ID=root;Password=;Database=mtn;"
         providerName="MySqlData.MySqlClient" />
  </connectionStrings>

  <system.web>
      <compilation debug="true" targetFramework="4.0" />
    </system.web>

</configuration>
```

CODING STARTS FROM HERE USING C# (C SHARP LANGUAGE) WITH ASP.NET

Note that if copying, then code section by section not all at once

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.UI;
using System.Web.UI.WebControls;

//HERE THESE TWO CODE MISSING, SO COPY AND PUT THEM HERE
using MySql.Data.MySqlClient;
using System.Data;

namespace Mtn_Uganda_ver_1._0
{
    public partial class client : System.Web.UI.Page
    {

        //PLEASE CODE THIS SECTIO OF CODE BTN THE START OF HERE AD
CHANGE DATABASE(OR CALLED CATALOG=mtn (your database name)

        MySql.Data.MySqlClient.MySqlConnection conn;
        MySql.Data.MySqlClient.MySqlCommand cmd;
        String queryStr;

        MySqlConnection conn2 = new MySqlConnection(@"Data
Source=localhost;port=3306;Initial Catalog=mtn;User Id=root;Password=''");
```

```
        // END OF CODE COPIED ABOVE

        //for saving into the database or submit data
        protected void cmdsave_Click(object sender, EventArgs e)
        {

            //PLEASE NOTE THAT THE NAME YOU USED IN CONNECTIONSTRING IN XML OR
WEB.CONFIG,SHOULD BE THE SAME HERE = (MtnAppConnString)

            String ConnString =
System.Configuration.ConfigurationManager.ConnectionStrings["MtnAppConnString"].ToString(
);

            conn = new MySql.Data.MySqlClient.MySqlConnection(ConnString);

            conn.Open();

            queryStr = "";

 //HERE U MUST NAME ALL OUR TEXTBOXES GOING TO BE USED IN SAVING DATA E.G FOR
REGNO(ID = a), NAME TEXTBOX (ID =b),Contact (ID=c) etc

            queryStr = "INSERT INTO mtn.client(RegNo,Name,Contact,Item,AmountPaid,DOR)" +
                "VALUES('" + a.Text + "','" + b.Text + "','" + c.Text + "','" + d.Text +
"','" + f.Text + "','" + ii.Text + "')";

            cmd = new MySql.Data.MySqlClient.MySqlCommand(queryStr, conn);

            cmd.ExecuteReader();
            conn.Close();

            //Response.Write("Your Data has been saved successfully !");
            ms.Text = "Your Data has been saved successfully !";

            clr();
        }

         // THIS CODE DOW HERE , IS A FUNCTION WHICH CLEARS FOR NEXT
APPLICANT AND WHY A FUNCTION, TO BE USED FOR MANY TIMES
        private void clr()
        {
            a.Text = "";
            b.Text = "";
            c.Text = "";
            d.Text = "";

            f.Text = "";
```

```
            ii.Text = "";

        }

         // THIS IS WHEN U DOUBLE CLICK ON THAT BUTTON CALLED CLEAR THEN JUST
PUT OE ENTER BTN {     AND } - clr();  THE WILL COME FOR THE FUNCTION
        protected void cmdclear_Click(object sender, EventArgs e)
        {
            clr();
        }

        //THIS IS THE CODE FOR DELETE AN APPLICANT
        protected void cmddel_Click(object sender, EventArgs e)
        {
            conn2.Open();
            MySqlCommand cmd2 = conn2.CreateCommand();
            cmd2.CommandType = CommandType.Text;

            cmd2.CommandText = "delete from client where RegNo='" + a.Text + "'";
//THIS IS THE CODE WHICH DELETES USING OUR PRIMARY KEY FIELD REGNO=" THE REGNO U WILL
ENTER IN TEXT a

            cmd2.ExecuteNonQuery();
            conn2.Close();

            //  Response.Write("Your Data has been Delete Permanently !");  // TRY TO
REMOVE THIS COMMENT AND SEE WHAT IT DOES

             ms.Text = "Your Data has been deleted successfully !";

            clr();
         }

    }
}
```

//FOR UPDATE CODE IS HERE (double update button and put

```
conn2.Open();
            MySqlCommand cmd2 = conn2.CreateCommand();
            cmd2.CommandType = CommandType.Text;

        cmd2.CommandText = "update client set RegNo='" + a.Text + "',Name='" + c.Text +
"' where RegNo='" + a.Text + "'";

            cmd2.ExecuteNonQuery();
            conn2.Close();

            Response.Write("Your Data has been Updated Successfully !");

            clr();
```

NOTE

Please make use of my codes for web development/Application/Business Application Programming as we did I class and copy code section by section or know how to fix but better where u typing yourself for exams practice.

Tools to use

1. IDE = interface designing using Visual Basic 2013
2. MySql as a server
3. MySql Connector

Start your own nice project for your final project to submit last.
